### Value Added Course Report- Industrial Automation using PLC

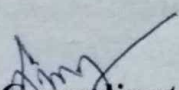

The Department of EEE, NSIT, Organized “Value added course on Industrial Automation using PLC during 22/04/2021 TO 26/04/2021 conducted through online mode due to covid'19 pandemic.

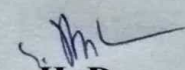

The main objective of this course was to make the aspiring engineers acquainted with the conceptual as well as practical knowledge of the Industrial Automation & latest technologies being used to achieve industrial automation.

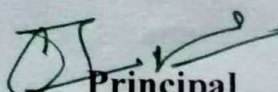

The idea of organizing this programme was to teach the basic fundamentals of automation in the students and provide them with a platform to work on, In The Near Future. The Most Used Guiding Force Behind an Automated Industrial Plant Is A “Programmable Logic Controller” Generally Known As A PLC. PLCs Along With Certain Other Necessary Ingredients Like Sensors, Motors, Actuators, Valves, Conveyors, Boilers, SCADA Systems, Computers & Many More, Makes A Real Automated Manufacturing Plant.

The Five Days intensive course on Industrial automation product (PLC System & SCADA software) has been conducted by IPCS, Kerala to involve students in a cohesive drive with the academia and industry towards excellence in automation product technology. This course was an attempt to cover material relevant to giving students necessary knowledge and skill set to appreciate the rapid changing scenario in automation systems and take advantage of this in their future career. Practical/laboratory sessions are held online, which will supplement the knowledge disseminated during the lecture sessions with adequate hands on experience. Courses support in instructor-lead, lab-intensive courses focused on the practical application of technologies through the facilitation of a project-related lab.

All the faculty and staff members actively participated in the event to make it a grand success.
